

# Economic Investments in Guam

## Office of Building Technology, State and Community Programs (BTS)

BTS works with partners in the private and non-profit sectors and in state and local governments to make the nation's residential and commercial building stock more energy-efficient, comfortable, affordable, and sustainable.

The mission of DOE's Office of Energy Efficiency and Renewable Energy is to promote a strong economy, cleaner environment, and more secure future through the development and deployment of energy efficient and renewable energy technologies.

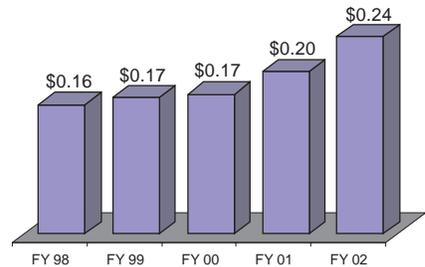

**BTS invested a total of \$0.5 million in Guam in Fiscal Years 2001 and 2002**

The **Guam Energy Office in Agana**, through the State Energy Program (SEP), received \$197,000 in FY 2001 and \$239,000 in FY 2002, for a variety of activities including implementation of the State Energy Plan, improving State Building Energy Codes, and providing public education and awareness efforts (e.g., hotlines, publications, and training).

**Guam State Energy Program**  
(millions of dollars)

Through the SEP Special Projects Office of Codes and Standards, the **Guam Energy Office in Agana**, received funding of \$50,000 in FY 2001 to provide training and technical assistance to continue educating the building industry and to conduct an evaluation of the new energy code.

**Rebuild Guam** received technical assistance from the Rebuild America program valued at \$20,000 in FY 2002. This program accelerates energy efficiency improvements in existing commercial, institutional and multifamily residential buildings through private-public partnerships created at the community level. It also assists with business planning, technical product development, marketing, workshops, and training for its partners.
