

Economic Investments in Missouri

Office of Building Technology, State and Community Programs (BTS)

BTS works with partners in the private and non-profit sectors and in state and local governments to make the nation's residential and commercial building stock more energy-efficient, comfortable, affordable, and sustainable.

The mission of DOE's Office of Energy Efficiency and Renewable Energy is to promote a strong economy, cleaner environment, and more secure future through the development and deployment of energy efficient and renewable energy technologies.

BTS invested a total of \$11.7 million in Missouri in Fiscal Years 2001 and 2002

The Missouri Department of Natural Resources Division of Energy in Jefferson City, through the State Energy Program (SEP), received \$747,000 in FY 2001 and \$872,000 in FY 2002 for a variety of activities including implementation of the State Energy Plan, improving State Building Energy Codes, and providing public education and awareness efforts (e.g., hotlines, publications, and training).

Missouri State Energy Program (millions of dollars)

SEMCO/Trane of Columbia received \$275,000 in FY 2000 to conduct research related to advanced desiccant cooling technology for more energy-efficient cooling systems. The company is developing and field testing desiccant systems suitable for larger building applications.

EnergyWorks, The Gateway Center, Housing Authority of the City of Springfield, and Rebuild Missouri received technical assistance from the Rebuild America program valued at a combined total of \$80,000 in FY 2002. This program accelerates energy efficiency improvements in existing commercial, institutional and multifamily residential buildings through private-public partnerships created at the community level. It also assists with business planning, technical product development, marketing, workshops, and training for its partners.

The Weatherization Assistance Program, through 18 local service providers (e.g., community action agencies) is working to increase energy efficiency and reduce the burden of energy costs to low-income Missouri residents, especially households with elderly residents, individuals with disabilities, and families with children. In FY 2001, Federal funding combined with leveraged state and local resources resulted in the weatherization of approximately 2,087 homes. In FY 2002, Missouri was allocated \$6,078,686 in weatherization funding.
